TESTBOY TV 329
Infrared thermometer

Today, life without temperature measurement is hardly imaginable, be it for the weather, the barbecue, chilled drinks, handicraft or industry. The perceived temperature is extremely relative.
Whereas Central Europeans feel extremely cold at -2° C, for the inhabitants of Greenlanders it is already spring-like. Fortunately, there are thermometers that can also measure without contact, such as the TV 329 infrared thermometer from Testboy with a measuring optics of 12:1. The pyrometer has a temperature range of from -50° C to 550° C (-58° F to 1022° F) and a backlit LCD. The emissivity is fixed at 0.95, which makes materials such as concrete, wood or painted surfaces can be measured very well. The practical pistol shape convinces with its uncomplicated and the switchable laser determines the temperature point to be t emperature point to be measured.

Your Benefits

> Data hold function
> Auto power off

Specifications

	Testboy TV 329	Accuracy
Indication	LCD with green backlight	
Measuring optics	12:1	
Measuring range	-50 – 550° C, -58 – 1022° F	±3,0° C, or ±3%
Laser dot	Manually adjustable	
Laser class	II, 650 nm, <1 mW	
Resolution	0,1 °C	
Response time	< 1 s	
Overflow indicator	"1" for overrange	
Emissivity	0,95 fixed	
Data hold	Yes	
Auto power off	Yes, after 15 s	
Dimension	160 x 86 x 46 mm	
Weight	130g	
Power supply	2 x AA, 1,5 V
